“ We are only limited by the imagination of our customers with regards to potential applications.”

The Davebilt Trailer system offers versatility, quality, strength and reliability to many agricultural applications and proven it's worth in the most demanding role of harvester front transportation.

In particular, contract harvesters require equipment which has capacity, reliability and will hold it's value, including a comb trailer that will handle many hundreds even thousands of kilometres of travel between jobs and back to base every year. The comb trailer must handle the rigors of rough roads and paddocks whilst carrying a very important piece of equipment plus a multitude of spare parts and service equipment.

In addition to this, the Davebilt Comb trailer helps to promote professionalism and quality to their customers.

FEATURES & ATTRIBUTES

- 04. 4000 Itr Fuel Trailer Derivative
- 05. Strong, Lightweight & Adjustable
- 06. Belly Tray & Load Binding System. Purchase in kit form or assembled. Pick up or delivery.

06

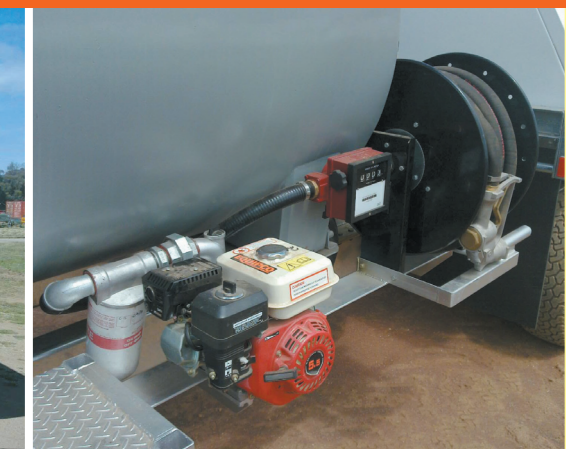

DAVEBILT TRAILER COMPONENTS

All Davebilt Trailer components use laser cut plates to ensure accuracy and uniformity and are bolt on, interchangeable. Optional features such as tray body and belly trays are bolted to the standard base trailer, they can be purchased and fitted at a later date or unbolted and removed.

95% of all Davebilt Comb trailer parts are interchangeable common parts. Additional or replacement parts can be purchased over the phone. “Other important design criteria included hot dip galvanising, bolt together adaptability and common part patterns so that this asset will do it's job and also good for many years. Our trailers can be adjusted to suit different harvester fronts, makes and models.”
